This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1 - 3 (canceled).

1
Claim 4 (re-presented - formerly dependent claim 1): ~~The pharmaceutical composition of claim 1 further comprising A pharmaceutical composition to alleviate the symptoms of uremia comprising a composition of a probiotic, a prebiotic, a sorbent for inorganic phosphate, and an adsorbent for specific uremic solutes other than urea and an ammoniaphilic urea degrading microorganism with high alkaline pH stability and high urease activity, said composition being microencapsulated or enteric coated with a material designed to deliver the probiotic, the prebiotic, and ammoniaphilic urea degrading microorganism to their site of action in relatively native form without binding of digestive materials to the composition prior to reaching the target region, wherein said prebiotic ensures the viability of the probiotic, and wherein said microencapsulated or enteric coating prevents the release of the ammoniaphilic urea degrading microorganism into the patient.~~

Claim ²/₇ (original): The pharmaceutical composition of claim ¹/₈ wherein the inorganic phosphate adsorbent is selected from aluminum hydroxide gel, calcium hydroxide gel and magnesium hydroxide gel and the specific uremic solute adsorbent is activated charcoal.

Claims 6-9 (canceled).

Claim ³/₁₀ (previously amended): A pharmaceutical composition to alleviate the symptoms of uremia comprising a composition of a probiotic, a prebiotic, an ammoniaphilic urea degrading microorganism with high alkaline pH stability and high urease activity, a water absorbent, a sorbent for inorganic phosphate and an adsorbent for specific uremic solutes other than urea, said composition being microencapsulated or enteric coated with a material designed to deliver the probiotic, the prebiotic, and ammoniaphilic urea degrading microorganism to their site of action ~~in relatively native form~~ without binding of digestive materials to the composition prior to reaching the target region, and wherein said microencapsulated or enteric coating prevents the infection of a patient from the ammoniaphilic urea degrading microorganism.

Claims 11-16 (previously canceled).
